About

I'm an enthusiast about web development, good practices, and knowledge-sharing. I have 7+ years of experience and during this journey, I've worked as a full stack developer and technical leadership. I always strive to keep improving myself, reading articles, going to conferences, or just challenging myself with side projects.

Education

Jan 2013 - Incomplete	Ulbra , B.S. in Computer Science
Jan 2010 - Dec 2012	QI , Information Systems Technician

Employment

Apr 2022 - Present	HelloFresh SE Frontend Engineer I work as a Frontend Engineer in the Frontend Infrastructure team. Basically, I work most of the time improving CI/CD, build time, test executions, adding automatic reports, and creating tools for other teams. Technologies are Next.js, Jest, Cypress, Github Actions, TypeScript, Node.js, Terraform, Honeycomb and etc.
Oct 2019 - Mar 2022	Warren Brasil

Sr. Software Engineer

I work as a web developer in the Banking team and I'm also a chapter lead in the company. I work most of the time improving the platform and helping other teams so they can work more quickly, dynamically and scalable. Technologies were Vue.js, Jest, GraphQL and Node.js.

Jan 2019 - Oct 2019

Share eat

Tech Lead

I've worked as a Technical Leader with a product that was a social gastronomy network (similar to Instagram). My main job was to communicate the product team to the technical team and align all expectations, think about architecture, scalability, monitoring and assisting the development team with any questions or blocks. Beyond the technical part, I also had to manage the people, doing 1:1, encouraging feedback practices and managing conflicts.

Dec 2016 - Dec 2018

4All Technology

Sr. Front-end developer / Chapter lead

I've worked with several products of the company, in particular a self-registration platform for establishments using React with Redux and a BFF with Node.js.

Another important project was an internal platform to control orders, products, users, etc.. where I actively participated in all the processes of this product using the concept of micro frontends with React.js and Redux.

Also, I worked together with the web chapter to improve web development practices in the company's teams. We create style guides, templates, coding dojo and talks

about web technologies. I also worked on some other projects for the company using React.js, Jest, Storybook, Node.js, MySQL and the entire structure of AWS.

Jul 2016 - Dec 2016

Real Networking

Front-end developer

I've worked on the principal product, which is a communication and information sharing platform between companies. My main task was a migration for the entire platform from JQuery to React and also add some features, fixing bugs and working with the product team about new features for the platform.

May 2014 - Apr 2016

Codex Remote

Web developer

I've worked on many important projects for the company using Angular.js, JWWidgets, Leaflet, Gulp on front-end and Java with hibernate or PHP with Codeigniter on the back-end.
